

CASE PACKER

Case Size	Min	Max
Length	4"	36"
Width	4"	30"
Depth	3"	36"

Since 1962, Edson has been designing and building case packing automation for users worldwide. The machine that started that lineage is the **Edson 1000 Semi Automatic Case Packer**. The 1000 is an economical packer for applications from high tech clean rooms to harsh corrosive environments.

The **1000** provides users with the simplicity of all pneumatic operation, with a wide product range. Economy and versatility all in one package, and when you are ready to retrofit to full case opening and sealing automation (**Edson 3100**), the **1000** is ready.

A full compliment of Edson options, from stainless steel frames, to networked controls, allows you to customize the **Edson 1000** case packer for your application. Ergonomics, economy, value.

Feature	Function	Benefit
Fully Adjustable Stainless Steel Packing Chute	Wide case size range	Handles from 'small' to large cases, including vertical cases
All Pneumatic Actuation	Major motions by simple, low maintenance 'off the shelf' devices	Economical machine; standardized components
Passive Case Dump Arm & External Palm Switch	Operator raises dump arm for case loading; operator outside work zone for case discharge	Safety, convenience, speed
Compact Machine Footprint	Nominal 10' x 6' x 5'	Fits in anywhere
Economical to Operate	Less than 1 SCFM per case; 15 amp @ 480 v	No special utility requirements
Allen Bradley or Siemens PLC	Industry Standard PLCs	Maintainable; upgradeable; easy to program
Premium Polyurethane Paint – 3 color choices	Smooth and resilient machine finish	Easy to wipe down; scratch resistant; matches other equipment

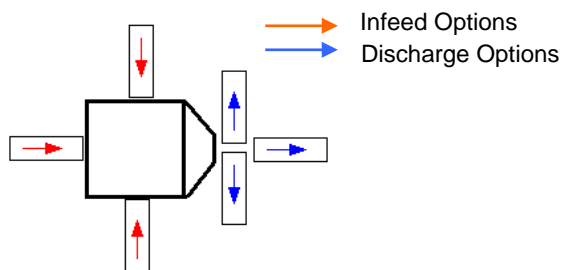

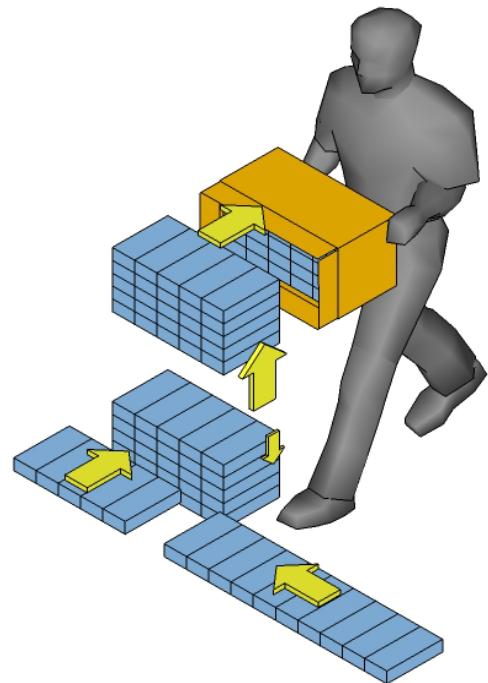

Ergonomics Meets Economics

The 1000 is a basic air powered case packer that enhances productivity, worker ergonomics and safety.

With a compact footprint and easy to operate features, the 1000 can increase packaging efficiency to up to 10 cases / min.

Combining operator safety with productivity on a typical semi-automatic case packer was always a concern. Edson uses ingenious passive devices and ergonomic features which optimize safety and increase speed.

The full range of size adjustment on the 1000 means there will always be a solution to any application.
