The Edson RP-200 provides first-class tray erecting performance of reusable plastic containers for the agricultural and protein industries at rate of up to 25 trays per minute. High speed servo’s are used to ensure quick and accurate handling of trays that are consistently secured minimizing downtime. Eliminating the manual erecting of trays will significantly reduce labor costs and improve safety.

The compact machine design features an ergonomic easy load single lane in-feed magazine to facilitate fast loading and minimal handling.

The RP-200 features a UL listed control panel complete with a color touchscreen HMI to perform machine function, setting input and changeover and onboard diagnostics, positive electrical mechanical controlled cylinder tote advance.

Edson’s industry leading quick-change features, including scribed and intuitive labels, provide quick changes between sizes and styles.

The RP-200 is backed by our nation-wide service team and commitment to total customer satisfaction.
STANDARD FEATURES

» Multiple stack single lane in-feed magazine
» Positive servo controlled tray positioning
